# Phase I

- A new Github account is created with an ID following the instructions as mailed. In my case my github user id is **PFA20SCM11P**

- A new issue is created with the title "**PFA20SCM11P adding first name**" and then labelled this issue according to the convention given.

- The project **SCM587FA20** is forked to my account and then cloned it locally.

- Since my first name starts with the letter D, my github userid is added to d.java file.

- The detailed version of the commit can be seen as

- Now, a new pull request is created which is approved and merged by the reviewer
